

The Advisor:

- Hands Free
- Voice Activated
- Conforms to USGA/PGA rulings
- Use on most courses - world wide
- Completely mobile
- Improves your game
- Lowers your score
- Computer Hook Up
- Download Courses
- Uses clear & simple commands
- Eliminates false ????

A wearable voice & audio GPS system that defines hazards, greens and more - user friendly for all skill levels.

**WEAR THE GAME  
WITH A CADDIE  
IN YOUR HAT!**

Advisor, a hands free, voice activated microcomputer GPS system is completely contained in the brim of a normal golf hat!

With fantastic technology the ground breaking Advisor, with personal audio response activated by the golfer's commands, gives the distance to greens, hazards of all kinds, boundaries and much more.

The Advisor has developed into the most revolutionary and exciting state of the art distance finder on the market today. No matter what your level of skill, the Advisor with its GPS, voice activated intelligent electronics is a miraculous advancement for golfers all over the world.

## The Birth of an Idea:

A constant frustration of using the point and click laser distance finder or the awful aggravation of having to carry a hand held device (GPS or Laser) or having to drive a cart (when possible) to the ball, just to get an accurate distance measure is the beginning of Gail Garratt's vision.

The Advisor idea came to Gail one day while playing an exasperating round of golf. Gail exclaimed, "Let's put it in the visor of a hat, and call it the advisor."

2 1/2 years of trials and refinements, plus the input of experts from Ireland, Britain, India the United States and Asia, the Advisor became a reality.

After four years of development the Advisor with one command advises any distance from the golfer's ball to a specific target, such as a water hazard, a bunker, the green even in detail of front, center and back of each.

Advisor's hands free pre-programmed targets prevent the time consuming need to aim, often missing, a target with a laser.

Advisor's hands free electronics will help instruct you the golfer on club selection, from a driver to a wedge, by indicating distance ??? Memory of previous shots.

Advisor's hands free response will define distance to trees and over, to rocks, ravines, hills and obstacles. Saving many strokes for you, the fortunate golfer owning the Advisor.

Combining lightweight miniaturized electronics, GPS technology, Voice Recognition and Wearable computing into a complete golf solution, ADVISOR is sure to set the benchmark for GPS Golf equipment both now and in the future.
